

要找到stdio.h很簡單, key下面的指令:

```
sudo find / -name stdio.h
```

你會找到三個檔

```
/usr/include/c++/9/tr1/stdio.h
```

```
/usr/include/x86_64-linux-gnu/bits/stdio.h
```

```
/usr/include/stdio.h
```

但查看文件內容及測試後,

得知題目要找的是第三個檔:

```
/usr/include/stdio.h
```

移除此檔後remake我們的code會看到

```
gcc a.c -o b
```

```
a.c:1:9: fatal error: stdio.h: No such file or directory
```

```
1 | #include<stdio.h>
```

```
  |      ^~~~~~
```

```
compilation terminated.
```

```
make: *** [makefile:2: all] Error 1
```

故知移除檔案會出錯, 無法編譯
